Instant Quote Webtool Developer Position

Summary: Hiring Software or Computer engineering, or Computer Science students in 2nd-4th year for a hybrid part-time position (mostly remote). We're planning to automate many elements of our workflow with the first project being the creation of a proprietary 'instant-quote' tool that would allow clients to upload 3D-models to our site, customize their order and automatically receive a quote in a matter of minutes, greatly reducing our turnaround.

Technical skills we're looking for include experience with UI/UX design, back-end programming, and webtool development
